

CUSTOM INTERIOR GRILLE

Interior grilles are available in a wide array of profiles and wood types. Grilles can be ordered as removable (helpful for interior glass cleaning) or applied to the interior glass surface (to create the feel of authentic divided lite units). We offer grilles for our own window units or for other manufacturers' units, with either square-edge or round-edge joint construction. Profiles for the corresponding grille joint options are shown below.

SQUARE - EDGE JOINT GRILLES Custom widths are not available.

ROUND - EDGE JOINT GRILLES All round-edge joint grille profiles can be manufactured in custom widths. Wider grilles do not maintain the same flat section proportions as shown below. Call our Customer Service Department for details.

NOTES Please specify if interior grille is removable or applied.

Grille alignment (with grilles in adjacent units) must be clearly specified when ordered. Call our Customer Service Department for details on grille pre-finishing options.

Removable interior grilles ordered separately from our windows, for open (unglazed) units or for other manufacturers' units, may be run long for customer sizing and field installation. Applied grilles will be run long and installer must apply tape after trimming grille to size in the field.

We may require customer-supplied templates for grilles being installed into other manufacturers' units and New Morning Windows' units that have already been shipped from our facility.

New Morning Windows may require a performance waiver to be signed by all interested parties if we consent to supply a grille in a pattern we deem likely to fail in the field without proper handling and care. These grilles are sold on a "best effort" basis.
